

Your building can become more energy efficient

ENGINEERED SOLUTIONS PROGRAM

The **Engineered Solutions** program provides technical expertise, project management, and financial incentives to organizations looking to make comprehensive energy efficiency upgrades to their building systems.

This program has been designed for the following organizations with an average annual demand higher than 200 kW:

Municipalities

Schools and
universities

Hospitals

Health care
facilities

Nonprofits

Multi-family
properties

Program overview

To support your efficiency projects, our energy experts will provide turnkey services, including:

- A no-cost, investment-grade energy audit
- Engineering design
- Bid-ready document development
- Installation vendor selection assistance
- Construction administration
- Building commissioning
- Measurement and verification services

Program benefits

- Maximized energy savings
- Reduced maintenance costs
- Improved comfort for building tenants
- Optimized climate control

Incentives and financing

The Engineered Solutions program provides an incentive to offset up to **100% of the audit cost**.

- The program **buys down the simple payback** of the recommended energy efficiency project cost by up to six years, with resulting payback not less than three years.
- Participants have the option to pay back the non-incentive portion of the project costs with **interest-free financing**.*

*Interest-free financing available up to \$250,000.

Incentives can make new equipment a reality

The **Engineered Solutions** program connects you with the professional expertise you need to save energy and money. Here's how the program benefited the owners of a garden-style, multi-family apartment building in our area.

The building has recently undergone several improvements and upgrades, including:

- Common area lighting and lighting controls
- Exterior lighting
- Low-flow kitchen and bath fixtures
- Tenant lighting
- Furnace updates
- Hot water pipe insulation
- Attic insulation

Total project cost:
\$700,000
- **\$450,000**
incentive

= \$250,000
net project cost

After 1 year:

Energy savings of
180,000
kWh per year
and **24,000**
therms

Recouping project costs:

With the incentive,
the project pays
for itself in
3 years†
Without the
incentive, it
could take
9 years
